EASE

TRAVELS

PUBLIC SOFTWARE REQUIREMENTS SPECIFICATION

A simple way to explore local travel options and request tickets

Document version	1.0
Prepared by	Ease Travels Team
Date	20 October 2026

For passengers and the general public

1. About Ease Travels

Ease Travels is a web-based platform designed to help people find local travel services in one place. Passengers can explore routes, compare available travel details, and send a booking request through the process supported by the relevant travel company.

1.1 Purpose of this document

This public document explains the main services users can expect from Ease Travels. It focuses on user-facing features and does not include internal development plans, technical architecture, database details, or private team information.

1.2 Main goals

- Make route, fare, and departure information easier to find.
- Help passengers compare travel options in one place.
- Present information about participating local travel companies.
- Make the booking-request process clear and easy to follow.

2. Who Can Use the Website?

User	What they can do
Passenger / visitor	Browse travel information, search for services, compare options, and submit a booking request where available.
Travel company	Provide service information through the agreed process so passengers can view current details.

3. Main Website Features

Feature	Description
Search travel options	Users can select a departure point, destination, travel date, and service type to look for matching options.
View bus services	Users can view available bus details, such as company name, route, departure time, fare, and vehicle category when provided.
View passenger-car services	A separate section can show passenger-car routes, fares, and availability information supplied by the service provider.
Review travel details	Users can check the information shown before deciding whether to submit a booking request.
Request a booking	Where the booking process is available, users can provide the required contact and travel details to request a seat or place.
Check booking status	If supported by the live booking system, users can use the provided reference or verification method to check their request.
View routes and companies	Users can explore the routes and participating travel companies listed on the website.
Contact Ease Travels	Users can use the published contact information to ask questions or report incorrect travel details.

4. How Booking Works

1. Open Ease Travels and choose the departure point, destination, date, and type of transport.
2. Review the matching services and the available fare, schedule, and availability information.
3. Select a suitable option and enter the required booking details, if booking is enabled for that service.
4. Follow the confirmation instructions shown by Ease Travels or the relevant travel company.
5. Keep the booking reference or confirmation message, if one is provided.

Important: Sending a booking request does not necessarily mean the ticket is confirmed. A booking is confirmed only after the applicable confirmation process has been completed.

5. Information Users May Need to Provide

Depending on the service, a booking request may ask for:

- Passenger name
- Contact number
- Selected route and travel date
- Number of passengers
- Seat choice, if seat selection is supported

Users should provide accurate information. Ease Travels should request only the information needed to handle the booking request.

6. Ease of Use, Access and Privacy

- The website should be easy to understand for first-time users.
- Pages should work on common mobile phones, tablets, laptops, and desktop computers.
- Travel details should be based on information provided by participating companies and updated when changes are reported.
- Booking and contact information should be accessible only to people who need it to handle the request.
- The website should clearly explain when a search has no results or required information is missing.

7. Service Information and Availability

Routes, fares, schedules, vehicle details, and seat or passenger availability depend on the information supplied by the relevant travel company. Information may change. Users should follow the latest confirmation provided by the company.

Some features—such as live seat availability, booking history, online payments, and automatic notifications—may be available only after the relevant system functions have been implemented. Their availability should be clearly indicated on the website.

8. Current Scope and Possible Future Features

The platform is intended to support the following core activities:

- Browsing routes and participating travel companies
- Searching for bus and passenger-car services
- Viewing available travel details
- Submitting booking requests where the process is enabled

Possible future improvements may include:

- Online payments through an approved provider
- Booking history and passenger accounts
- Automatic fare, schedule, and availability updates
- SMS or WhatsApp notifications
- Cancellation, refund, ratings, and feedback features

9. User Support

For questions about a listed service, booking request, or incorrect travel information, users should use the official contact details published on the Ease Travels website. Before travelling, passengers should confirm important details with the relevant travel company.

Public-facing summary: Ease Travels helps passengers discover local travel options and request bookings where supported. Actual availability and confirmation depend on the service and its booking process.
